

Indicator: Tick Count Bar

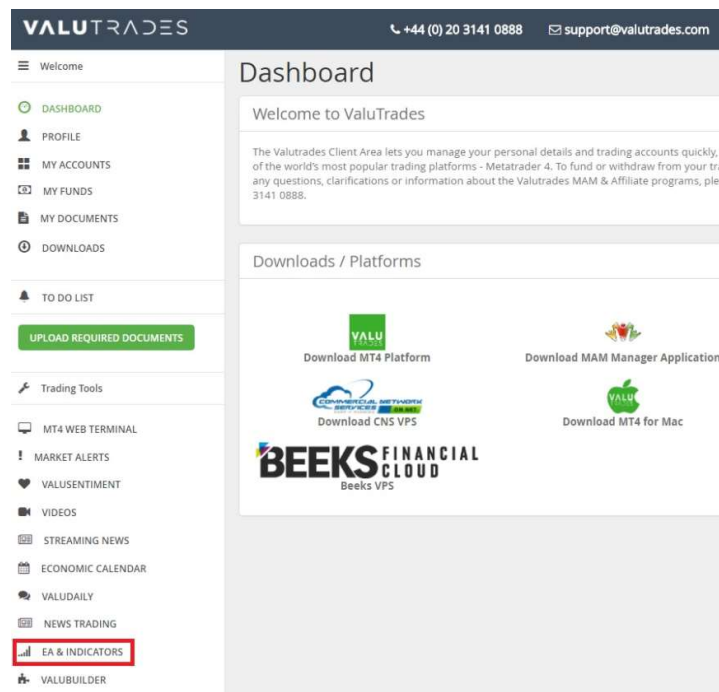

Tick-based charts are based on any number of price changes of transactions - ticks. In periods of higher market volatility more candles will print, magnifying price action. On the other hand, during periods of lower market activity, fewer candles will print.

Please follow below the step by step to download and start to use Valutrades` exclusive indicator.

Step 1: Login to your Client Area using your personal account details:

Step 2: Inside the client area, on the left Menu please select the option EA & INDICATORS:

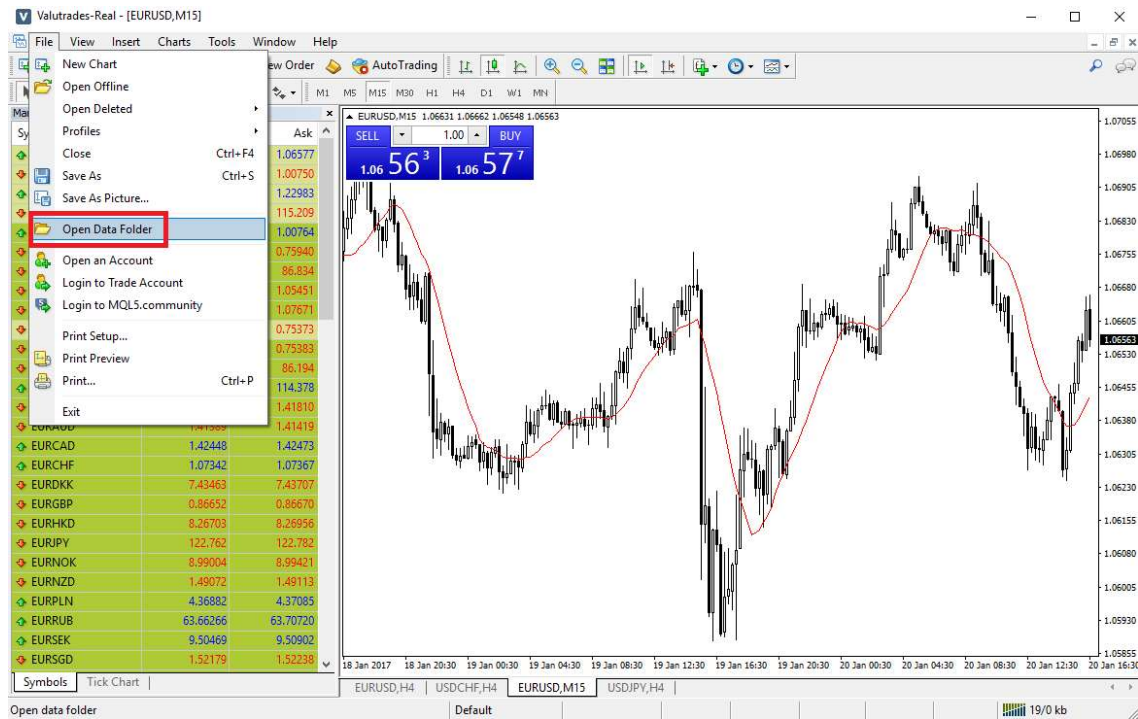

Step 3: Find the line Tick Count Bars and click on the Download button.

EAs and Indicators

Title	Description	Download	Download Instructions
OHL	Open, High and Low indicator.	Download	Download Instructions
Tick Count Bars	Tick-based charts are based on any number of price changes of transactions - ticks.	Download	Download Instructions
Double Top / Bottom	Highlights double tops and double bottoms on the chart window.	Download	Download Instructions
Inside Outside Bars	Highlights inside and outside bars on the chart window.	Download	Download Instructions
Three Strike Pattern	This indicator will highlight a three strike pattern when it occurs on an MT4 chart.	Download	Download Instructions
Support Resistance Lines	This indicator will draw support and resistance lines on an MT4 chart.	Download	Download Instructions

Scripts	24/03/2017 11:18	File folder

Step 6: Drop the indicator file inside the folder:

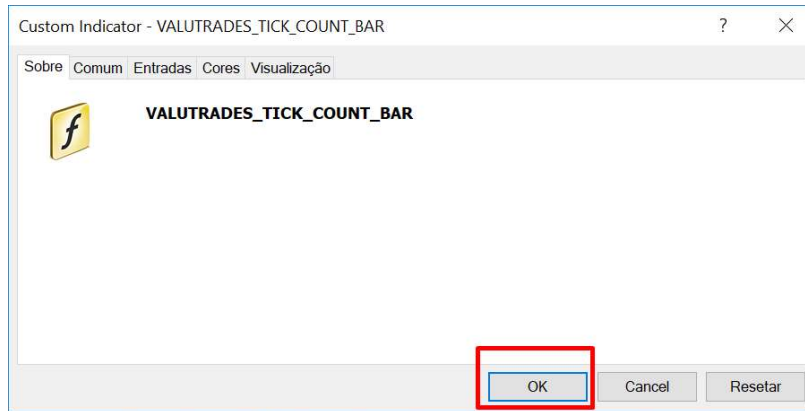

Stochastic.ex4	13/11/2017 08:52	EX4 File
ZigZag.ex4	13/11/2017 08:52	EX4 File
VALUTRADES_TICK_COUNT_BAR.ex4	30/11/2017 09:28	EX4 File
mqlcache.dat	30/11/2017 09:40	DAT File

Step 7: Restart your Valutrades MT4.

Step 8: Select the option Navigator on the top Menu, open the Indicator folder. Where you are going to find the Tick Count Bar Indicator:

Step 9: Click on the indicator line and drag to the chart. You are going to receive the message box below, click on button OK:

Instructions:

1.

First thing you should do is to adjust the font sizes of the chart buttons by hitting the green Info-ON/OFF-Button on the chart. As the Info screen becomes visible 2 sets of buttons become active:

the upper ones are for adjusting the font size of the full height chart buttons

the lower ones are for adjusting the font size of the half height chart buttons

The font size of the half height chart buttons is coupled to the font size of the full height chart buttons at a certain ratio, that means: if you change the font size of the full height chart buttons the font size of the half height chart buttons is changed too, automatically. But the font size of the half height chart buttons also can be changed independently.

To close the Info screen please hit the Info-Button again to return to the Candle-Chart. The indicator remembers the adjusted font sizes next time you start the indicator by creating a font size file in the Files-folder of MetaTrader4 on closing the Info screen.

If your screen resolution is too low to display the green Info-ON/OFF button on the chart you can access the Info screen by hitting the i-key (lower case or upper case). Prior to hitting the i-key you have to click anywhere on the chart. To close the Info screen please hit the i-key again.

2.

As the indicator doesn't use historical data it takes a while until the first TickCountBar builds up and becomes visible. For that reason you should choose a daytime with high frequency trading to test the indicator.

3.

For fast adjustment of the offset of the TickCountBars versa the Candlesticks you may use the Cursor UP or Cursor DOWN keys - instead of the buttons on the chart.

4.

Fast reset to zero of the offset of the TickCountBars versa the Candlesticks can be done by clicking the full height Button "Offset".

5.

Pips-Measuring-Mode is activated / deactivated by double clicking anywhere on the chart - but not on the buttons or between the buttons. The indicator remembers the state (ON or OFF) of "Pips-Measuring-Mode" by creating a file or deleting this file in the Files-folder of MetaTrader4.

6.

The indicator remembers the amount of ticks to count to (adjustable by buttons on the chart) by creating a file in the Files-folder of MetaTrader4 which is kept after closing MetaTrader4.

7.

The indicator remembers the values from which the TickBars are created after a change of timeframe by creating a file in the Files-folder of MetaTrader4. Its name is "TickCountBars.txt", with symbol name preceded. This file is created only at the very moment you initiate a change of timeframe and will be deleted when you disconnect the indicator from the chart or when you shut down MetaTrader4.

8.

The two horizontal blue lines above Candle Zero always mark the size of a Pip and are good for to see in which range the candles are with only a glance.

9. Restrictions:

a)

Please never initiate a change of timeframe during Info ON – else you get a button state mess on your chart resulting in uncertainty of TickBars ON/OFF Candles ON/OFF Grid ON/OFF and you will have to click those buttons to put them to a defined state. And you suddenly may get a Bar Chart instead of your predefined Candle Chart.

b)

Please be aware that you may miss some ticks when you change timeframe.

c)

Other indicators which you may attach to the chart will have no effect regarding the TickCountBars as these additional indicators have no access to the data of the TickCountBars.

But please feel free to contact me, if you desperately need such access for other indicators.
